

ABSTRACT OF THE DISCLOSURE**AUTOMATIC WINDOW REPRESENTATION ADJUSTMENT**

5 A method, system, and program for automatically adjusting
window representations based on activity are provided. Current
activity of a window element displayed within a graphical
interface is detected. A representation of the window element is
10 automatically adjusted within the display area to reflect current
activity of the window element, such that the representation of
the window element is graphically represented. In particular,
the window element representation may include a minimized icon or
an open window. Further, window element activity may include use
15 of the window element, adjustments to the transparency of the
window element representation or current resource usage
associated with the window element.
